General information 13

Summary of findings for the year 2010

Gross farming income

Gross farming income (GFI) earned by the commercial farming sector was R121 766 million in 2010 compared with R119 194 million in 2009. The GFI figures reflect a slight growth of 2,2% between 2010 and 2009. A detailed comparison of GFI by farming activity between the two years is provided in Table 2. It can be observed from Figure 1 that, with the exception of the income earned from field crops, the income generated from all categories of farming activities recorded an increase in 2010. The highest percentage increase was recorded for income earned from animal products (4,4%), followed by horticulture (2,1%) and animals (1,2%). Field crops showed a decrease (-4,3%) over the same time period.

However, the contribution to GFI of the different types of farming activities by proportion remained almost the same in 2010 as in 2009 (see Table 2).

Figure 1 – Gross farming income by type of product

Current expenditure

The total current expenditure incurred by the commercial farming sector for the financial year ending 28 February 2010 was R89 286 million compared with R86 590 million in 2009. Figure 2 shows the major contributors towards the total current expenditure for both years. Two of the major contributors to the total current expenditure registered a decrease in 2010; fuel and fertilisers purchased recorded decreases of 13,4% and 6,4%, respectively (refer to Table 3).

Stock, poultry and aquaculture feed reflected an increase of 4,2%.

Figure 2 – Current expenditure according to major contributors

Farming debt

The total farming debt among operators in the commercial farming sector was estimated at R64 078 million in 2010, a decrease of 0,5% compared with 2009. As illustrated in Figure 3 and Table 7.2, the major lenders to the commercial farming sector in both 2010 and 2009 were commercial banks and private persons.

Figure 3 – Distribution of farming debt by type of creditor

Capital expenditure

The total capital expenditure in the commercial farming sector amounted to R11 167 million in 2010 compared with R10 958 million in 2009, an increase of 1,9% between the two years. Figure 4 and Table 4 show that expenditure on new assets was the major constituent of capital expenditure.

Figure 4 – Distribution of capital expenditure

Employment

The number of people employed in the commercial farming sector decreased by 1,0% to 866 417 employees in 2010 from 874 877 employees in 2009. The employment trends between the two years are shown in Figure 5. Detailed employment figures for the two years are provided in Tables 8 and 9. The number of fulltime employees decreased by 1,0% from 461 806 in 2009 to 456 958 in 2010. The number of casual and seasonal employees also decreased, by 0,9% from 413 071 in 2009 to 409 459 in 2010.

Explanatory notes

Introduction Statistics South Africa (Stats SA) conducted an agricultural survey in South Africa on farming units in 2010. A sample of 15 000 enterprises was drawn from Stats SA's business register (BR). The frame was adjusted by removing all the enterprises below the 0,5% percentile turnover. The BR is based on the income tax (IT) and value added tax (VAT) databases of the South African Revenue Service (SARS). All enterprises are legally bound to register for IT and/or VAT. Enterprises registered in the taxation system are included on the BR, and hence were given a chance of selection in the sample for the survey.

This statistical release contains information regarding:

- Income and expenditure items for the financial year;
- Employment as at 28 February 2010 for the 2010 survey;
- Employees' remuneration for the financial year;
- Losses during the financial year;
- Farming debt as at 28 February 2010 for the 2010 survey; and
- Book value of assets at the end of the financial year.

Reference period The questionnaires for the Agricultural Survey 2010 were completed for the financial year which ended on any date between 1 March 2009 and 28 February 2010. The Agricultural Survey 2010 period is referred to as 2010 in the report.

Purpose of the survey The agricultural survey collects data on the commercial agricultural sector and its results are vital for benchmarking the gross domestic product (GDP) and its components, production and price indices, annual and short-term statistical series, and for comparisons within and between industries.

Users of the agricultural survey include:

- Price statisticians, particularly in updating the commodity basket of producer price indices;
- Policy advisers in government for monitoring the performance of industries and their contribution to the South African economy, and for evaluating the effectiveness of industry policies;
- Industry associations monitoring trends on their own and competing or complementary industries in order to inform their members of market changes; and
- Individual businesses using the data to analyse their performance relative to their industry.

Scope and coverage

The Agricultural Survey 2010 covers statistics of enterprises mainly engaged in:

- Growing of crops, market gardening and horticulture (SIC 111);
- Farming of animals (SIC 112);
- A combination of the above (mixed farming) (SIC 113); and
- Fish hatcheries and fish farms (SIC 132).

The following categories are excluded:

- Agricultural and animal husbandry services, except veterinary activities (SIC 114);
- Forestry and related services (SIC 121);
- Logging and related services (SIC122);
- Ocean and coastal fishing (SIC 131);
- Hunting, trapping and game propagation, including related services (SIC 115); and
- Production of organic fertiliser (SIC 116) only in 2008.

Data in respect of agricultural smallholdings such as nurseries, vegetable gardens, flower farms and dairy farms are included in this release only in those cases where the products were intended for sale.

Classification by industry

The 1993 edition of the *Standard Industrial Classification of all Economic Activities* (SIC), Fifth Edition, Report No. 09-09-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 *International Standard Industrial Classification of all Economic Activities* (ISIC) with suitable adaptations for local conditions. Each enterprise is classified to an industry which reflects its predominant activity.

Statistical unit

The surveys' data were collected at an enterprise level.

Size groups

The enterprises are divided into four size groups according to turnover as recorded on Stats SA's BR. The size group stratification used in the survey was adopted from the Department of Trade and Industry's 2003 cut-off points. The size groups are indicated in Table A.

Table A – Cut-off points by size groups for the Agricultural Survey 2010

Size group	Turnover
1	Turnover ≥ R5 million
2	R3 million ≤ Turnover < R5 million
3	R500 000 ≤ Turnover < R3 million
4	R200 000 ≤ Turnover < R500 000

Survey methodology and design

The survey was conducted by post, fax, telephone, email and personal visits. A sample of approximately 15 000 enterprises was drawn using stratified simple random sampling. The enterprises were first stratified at three-digit level according to the SIC and then by size of enterprise. All large enterprises (size groups 1 and 2) were completely enumerated. Turnover as recorded on the BR was used as the measure of size for stratification.

Weighting methodology

For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated size groups 1 and 2 to form the total estimates. These procedures, which are in line with international best practice, are described in more detail on the Stats SA website at www.statssa.gov.za/publications/publicationsearch.asp

Relative standard error

Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they might differ from the figures that would have been produced if the data had been obtained from all enterprises in the agricultural industry in South Africa.

One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance as only a sample of enterprises was used. The relative standard error (RSE) provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer to the size of the estimate.

Comparability with the previous surveys

This release is in many aspects comparable with Agricultural Censuses 2002 and 2007 and Agricultural Surveys 2008 and 2009.

Response rate

Collection and turnover response rates on the Agricultural Survey 2010 were 75,8% and 88,3% respectively.

Glossary

Farmer: Individuals, partnerships, close corporations, companies or other enterprises that operate a farming unit for their own account; or managers, foremen or other persons to whom the control of a farming unit was entrusted.

Farming unit: Any unit on which one or more of the following farming operations are carried out for commercial purposes:

- Cultivation in the open air or under cover of field crops, vegetable plants, fruit or flowers;
- Operation of a tea, coffee or sugar plantation;
- Breeding of livestock, poultry, game or other animals, including freshwater fish, furred animals and trade in livestock; and
- Production of milk, wool, mohair, eggs or honey.

Type of employment

- 'Permanent employees' are employees who are employed on a permanent basis with benefits, such as leave.
- 'Casual and seasonal employees' include occasional and day labourers, e.g. shearers, reapers and fruit-pickers, but exclude contractors and their employees.

Gross farming income: Gross farming income, as reported by the farmer, includes income earned from agricultural products sold, but excludes other income. In this release, agricultural products are divided into field crops, horticultural products, animals and animal products.

- 'Field crops' include cereals, oil seeds, fodder crops, etc.
- 'Horticultural products' include vegetables, fruits, nuts, etc.
- 'Animals' include livestock, poultry, game, aquaculture and all other animals.
- 'Animal products' include milk, eggs, wool, etc.

Other farming income: Income generated from the sale of forestry and bee farming products and any form of income generated from primary farming (excludes income from crops, animals and animal products and aquaculture).

Current expenditure: Expenditure incurred in farming operations during the financial year in respect of the farming unit, as reported by the farmer. These expenses include seed stock, poultry feeds, fertilisers, fuel, packing material, electricity, interest paid and all other operating expenses. Railage and rented transport are also included in the relevant purchases.

Farming debt: Includes all financial obligations incurred in respect of normal farming activities, such as mortgages, loans and credits received from organisations such as banks, cooperative societies and private persons. Debt in respect of other business enterprises is excluded. Particulars regarding farming debt are based on data submitted by the respondents.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
 National Library of South Africa, Cape Town Division
 Natal Society Library, Pietermaritzburg
 Library of Parliament, Cape Town
 Bloemfontein Public Library
 Johannesburg Public Library

Eastern Cape Library Services, King William's Town
 Central Regional Library, Polokwane
 Central Reference Library, Nelspruit
 Central Reference Collection, Kimberley
 Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via online services, diskette and computer printouts. For more details about our electronic data services, contact: (012) 310 8600 / 8390 / 8351 / 4892 / 8496 / 8095. You can also visit our website: www.statssa.gov.za.
